FIBERGLASS GUTTER™

## WHY BOSTON PROPER?

### Aesthetically Accurate Architectural Detail

After many years of wood gutter maintenance and repair, two individuals – a home builder specializing in historic renovations and a master composite boat builder with 35 years experience building high-end boats – joined forces to reproduce the most commonly used and aesthetically pleasing gutter and molding style in the traditional fine home building business, the Boston Profile. The result: the Boston Proper™ fiberglass gutter.\*

### Reliability – No Leakage

Without question, Boston Proper™ is a step above any other system available today. Comprised of several layers of fiberglass, Boston Proper™ is an obvious choice now that the option is here. Rugged and 100% leak-proof, Boston Proper™ will help protect your investment for a lifetime.

### Maintenance

With mandatory annual maintenance, traditional wood gutters have an

additional cost which is never-ending. Boston Proper™ simply requires cleaning of debris and an occasional washing. Manufactured with a molded-in isothalic Gelcoat, the finish will endure over twenty-five years with no service.

### Ease of Installation

Another top selling point for installers and property owners or managers is ease of installation. Boston Proper™ installs in about one third the time of a traditional gutter system. This ease of installation, combined with low maintenance and the assurance that your gutter system is not a threat to your investment, make Boston Proper™ an easy choice for any builder, owner, manager or superintendent of a project where historic character and detail are important.

### Twenty Year Warranty

Finally, a twenty year warranty on all gutters against defects in workmanship and materials make Boston Proper™ a simple, cost-effective insurance policy for your investment and time – simply better, for those who know!

A recent installation of Boston Proper™ fiberglass gutter by Architectural Composites of New England on an historic Duxbury, Massachusetts home, including a newly constructed addition.

Two hundred year old home on Powder Point in Duxbury, Massachusetts, restored and refitted completely with Boston Proper.™

For years, builders and homeowners have been maintaining and repairing wood gutters to achieve a pleasingly traditional aesthetic appearance. Failures of major proportions often begin with a failed wood gutter. Now, Architectural Composites of New England introduces the solution: Boston Proper™ Fiberglass Gutter.
