## FINISHING SERVICES

### QUALITY WOOD PRIMING PRE-FINISHING SERVICES IN OUR STATE OF THE ART FACILITY

**QUALITY**  
WOOD PRIMING

### PRACTICAL BENEFITS OF PRE-FINISHING AT COASTAL.

- Color and finish are closely monitored and maintained in a climate controlled, in-door environment
- Our process treats the product on all sides to minimize the intrusion of moisture, ultimately prolonging the effectiveness of each coat
- Our process virtually eliminates the possibility of applying coatings over moisture, mold, dirt, or on weathered product
- Factory coating increases productivity by allowing installation of exterior products during colder months when field coating is either impossible or not recommended at those lower temperatures
- Pre-finishing saves valuable time on the project site, which translates into savings directly to the project's bottom line

Choose from the Color HPX, Manufacturers' Factory Finish Color Palettes, or a custom paint or stain color. Quality Wood Priming applies PPG DuraColor IM 100% acrylic latex coatings to exacting standards in a factory controlled environment with the ideal level of temperature and humidity.

## FACTORY FINISHED COLOR HPX™ SIDING & TRIM PALETTE

APPLY A FACTORY FINISH TO YOUR CHOICE OF SUBSTRATE.
